

Maintenance: CSTC has a Maintenance Department dedicated to keeping the residential cottages safe, secure, and in full repair for clients, staff and visitors. The Maintenance Department works closely with all cottage staff to promote a safe living and working environment. Maintenance is also regularly in the cottages and school buildings interacting with the patients during the times they are completing work orders. Further, they occupy a building on campus grounds, and have the resources, skills and abilities to assure full maintenance of both the inside and outside our physical plant. Maintenance responds to both facility repair (patch and paint) and sudden problems (clogged toilet, broken heater) through a network of triage, troubleshooter, and order received systems. The physical plant consists of 6 buildings located on the far eastern side of the Western State Hospital Campus. One large building provides administrative and professional offices, conference rooms and the Oak Grove Elementary School and gymnasium. Another building houses the Secondary School, Firwood. Three buildings are the actual cottages, Orcas, Ketron and Camano. The final building is a recreation and maintenance cottage for storage of supplies.
